Profile

I'm a creative and driven software engineer with a passion for building robust, scalable solutions—currently focused on backend performance and master data systems in a corporate setting. With experience spanning high-impact environments like CERN, I thrive in collaborative teams where sharing ideas leads to better solutions. I'm always eager to learn, experiment with AI-powered features, and deliver reliable products that make a real-world difference. I'm looking for opportunities to work alongside passionate professionals on ambitious, meaningful projects.

Education

2018 – Present

ICT Software Engineering, VIA Horsens

Focused on software development, machine learning and project management

2016 - 2018

Automotive engineering, Aarhus Maskinmesterskole

Covered embedded programming for ECUs, mechanical systems, and applied electronics

Work experience

Stibo Systems

Software Engineer – Fullstack & System Design

Aug 2022 – Present

- Building fullstack features with Java, React, and Elasticsearch
- Designing data models and optimizing algorithms for fast, accurate search
- Handling DevOps tasks with Gradle, Jenkins and Azure
- Implementing AI to merge similar records and boost data quality
- Ensuring secure, multi-tenant setups with clear data separation

Hobbies

- Music (guitar, ukulele)
- Motorcycles
- Travel
- Philosophy
- Psychology
- Creative writing
- Games (board, D&D, PC)

CERN

DevOps & System Design Engineer

Aug 2020 – Sep 2021

- Built CBNG v4, a custom Gradle-based build and dependency tool
- Developed RESTful services using Spring for internal control systems
- Created a UI for the Controls Artifact Service using Angular

Holme Gruppen ASP

Web Developer & System Designer

Apr 2019 – Aug 2020

- Built automation systems for loan processing with Basisbank and ExpressBank
- Developed custom PHP plugins and WordPress solutions
- Created and maintained e-commerce platforms like Fashiongirl.dk and Lookperfect.dk

Additional skills

- Strong interpersonal and communication skills
- Mentor for junior developers and interns
- Experienced team lead and project owner
- Led architecture and development of major systems (e.g., CBNG v4 at CERN)
- Acted as a bridge across backend, DevOps, and deployment teams
- Head of a community philosophy panel, driving thoughtful discussion
- Skilled at translating complex tech into clear, actionable solutions
- Constantly exploring new tech—self-driven AI research and rapid prototyping
- Uses AI creatively: game development, UX ideation, illustration generation
